

Machine overview

The heading machine is professional cold upsetting forming machine, which is matched with automatic thread rolling machine in the whole plant of making screws.

Its purpose is to be adopted such as carbon steel, stainless steel, aluminum, copper and other material wire, with appropriate mould, according to the allowable pressure wire than, under the effect of crank-shaft connecting rod drive the slider, automated, fast after the required size of the wire will be automatically shear, extrusion in the mould for needed fastener head type, stem diameter, facilitate thread rolling, or become a qualified

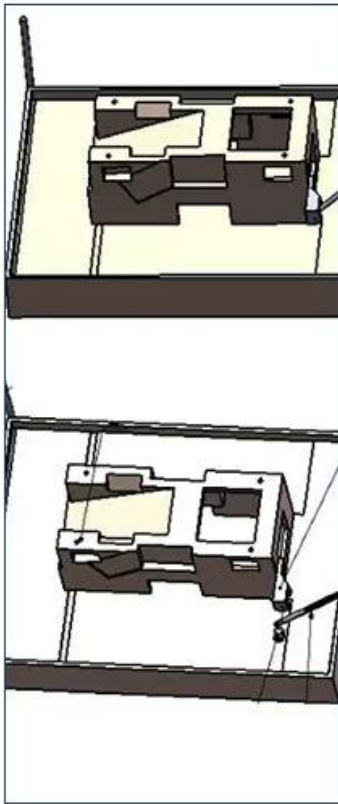

ed rivet type fastener ,the heading machine automaticapply processes the wire into semi-finished products.
