

La machine à rouler de filetage adopte la conception de distance de filetage de filetage à deux filetages à 1/2 à la distance de vis, une plaque est fixe, la plaque mobile est sur la plaque fixe faire un mouvement de ligne droite dans les deux sens, lorsque la pièce de travail alimente entre deux plaques, la plaque mobile se déplace de la pièce de travail de torsion vers l'avant, transforme sa déformation plastique de surface en filetage. Pour rouler du fil sur la tige de boulon vide après avoir été froide.

RAINBOW

HIGH-SPEED AUTOMATIC THREAD ROLLING MACHINE

The machine is shown against a blue background with a faint industrial cityscape. It features a large green main body with a grey base and a red control panel on top. A small inset image in the upper right corner shows a close-up of the internal mechanical components.

THREAD ROLLING MACHINE PART OF THE STRUCTURE

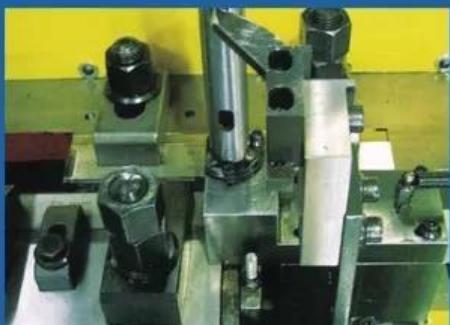

TRANSPORTATION MATERIAL

Sloping filling-90 degree obliquity with main slider

TRANSPORTATION MATERIAL

Sloping filling-30 degree obliquity with main slider

NO HEAD SCREW

Through no head screw feeding system, the system solves problems in no head 'screw bottleneck with advanced value ir machinery.

ORBITAL BRACKET

To stabilize filling progress in order to avoid floating head and increases fine quality.

FORCIBLE OIL CARRYING

It replaces traditional acrylic oiler which damaged main slider. This precision filter system not only lowers direct cost in production but also extend life usage in recycle.

AUTO FEEDING SYSTEM

Replaced cam by auto feed system, effectively avoids the cam abrasion in the production process.
