

The thread rolling machine adopts two thread profile thread rolling plate staggered 1/2 screw distance design, One plate is fixed, movable plate is on the fixed plate do straight line motion back and forth, when the work piece feed between two plates, movable plate move forward twist work piece, make its surface plastic deformation into thread. To roll thread on blank shank of bolt after being cold-headed.

THREAD ROLLING MACHINE PART OF THE STRUCTURE

TRANSPORTATION MATERIAL

Sloping filling-90 degree obliquity with main slider

TRANSPORTATION MATERIAL

Sloping filling-30 degree obliquity with main slider

NO HEAD SCREW

Through no head screw feeding system, the system solves problems in no head 'screw bottleneck with advanced value in machinery.

ORBITAL BRACKET

To stabilize filling progress in order to avoid floating head and increase fine quality.

FORCIBLE OIL CARRYING

It replaces traditional acrylic oiler which damaged main slider. This precision filter system not only lowers direct cost in production but also extends life usage in recycle.

AUTO FEEDING SYSTEM

Replaced cam by auto feed system, effectively avoids the cam abrasion in the production process.
