

Machine Introduction

Sorting system is the use of high-resolution cameras to obtain images of the object to be tested, and then by the industry with R & D team developed software systems trick is matching the size of the image and the relationship between, and thus low-cost, high-performance technology from the test operation. Use of this system can reduce tedious and labor-consuming manual processes and reduces human error detection, significantly enhance the quality of products shipped, increasing the company's external competitiveness.

Machine Features

1. Using glass of high transparency, objects can be placed on the detection of the disk smoothly.
2. Detection range: screws, nuts, seals, silver contacts, stampings, special hardware, electronic components,
3. Suitable for small objects
4. Detection speed: Depending on the object and the feeding system. Max. speed: 50-1200 piece/minute.
5. Easy replacement of parts, simple operation.

Items can be detected:

Multi-Height , Multi-width , Length , Internal/external thread diameter , Pitch diameter/thread number, Slanted thread/deformed thread, Head crack, Burrs or chips, Broken pin or recess depth , Across comer/across flat , Diameter/hole diameter , Roundness, Chamfer , Thread or not , With coating , With washer , Cross recess depth , Surface flaw.

倒角/真圆度/内径/外径
Chamfer/Roundness/
Internal/External

表面裂纹
Surface crack

孔径
Aperture

内倒角
Inner bevel

对角/对边
Across Corner/Across Flat

孔径/宽度/长度
Aperture / width / length

有无文字
Head Mark

多个孔径
Multiple aperture

焊点高度
The solder joint height

高度, 外径
Height, diameter

缺角
Horn

焊点面积
welding points area

倒角直径
Chamfer diameter

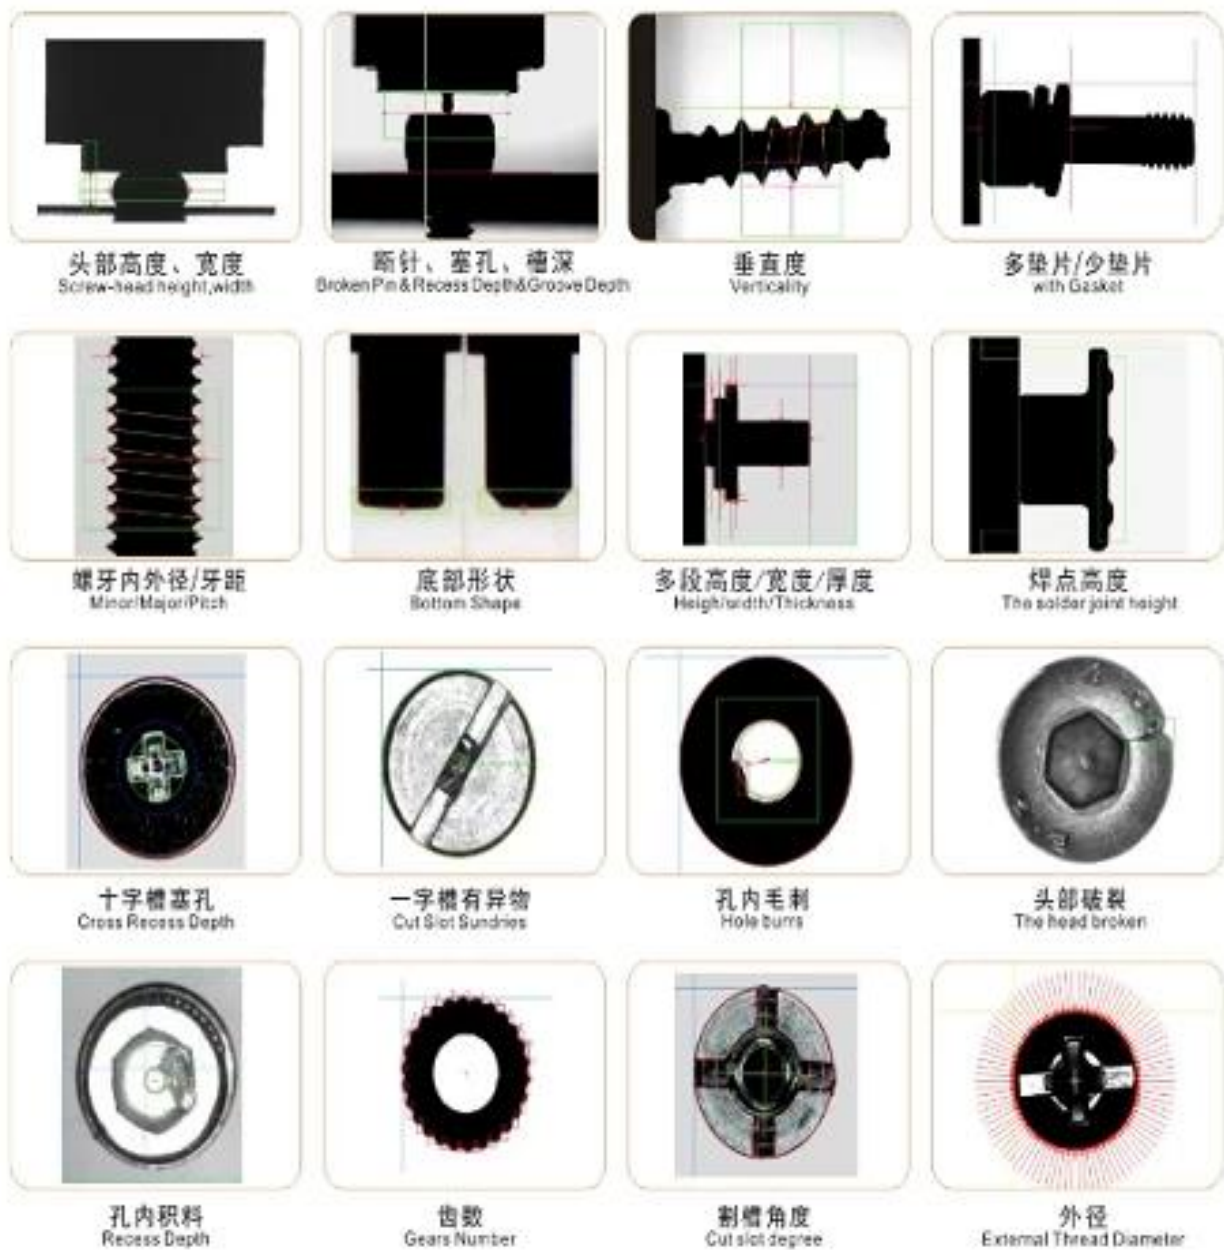

花瓣尺寸
Petal size

有无牙/牙距/牙数
W/Thread: Yes or No/Pitch
Diameter/Thread Number

插槽宽度
Slot width

Exhibition Abroad:

Every year, we will attend to at least two foreign exhibitions, like in India, Vietnam.
