

Machine description

Vibration plate, vibrating contrast and precise counting control unit Screw unit is based on a sample custom, to ensure that each package is accurate.

PLC control, machine interface operation and it was so easy to adjust the equipment and its operation, high degree of automation.

Intelligent temperature controller is adopted to control the level and Longitudinal sealing temperature can be achieved firm seal, sealing, Smooth and beautiful bag, high packing efficiency.

Stepper motor subdivision technology, using a bag system, Bags color code automatic tracking and positioning, and Operation and adjustment to the bag can be easily done, it is characterized by a Fast, smooth operation, low noise.

Packing speed that is within the nominal range stepless adjustment time, Positioned as open and stop.

Bag, measuring, filling, sealing, cutting and batch printing It can be done automatically. Packaging and vibration measurement count using Uniform density accurately, in line with national standards of measurement.

Counting and packing speed
